THE INSIDE LOOK

The Kenworth Parts Council

What is it & What Does it do for us?

The Kenworth Parts Council is a group of elected representatives from Kenworth dealerships throughout the United States and Canada. The two countries are divided into 7 regions and each region has one representative that has a seat on the Parts Council. The job positions held by members of the Parts Council, at their respective dealerships, vary between parts managers, parts sales managers and directors. I have been the Great Lakes Regional Parts Council Chair for the last two years and have gained valuable knowledge and relationships as a result.

The purpose of the Kenworth Parts Council is to provide a forum for the exchange of ideas between

Kenworth Parts Managers, Kenworth Parts Directors, Parts Sales Managers and PACCAR Parts management on topics that affect the overall success of their mutual businesses. PACCAR Parts recognizes the Interdependency between dealers and PACCAR Parts. The spirit and intent of the council is to provide a forum for improved teamwork and dialogue between both parties...PACCAR Parts regularly seeks input from the council...The mutual goal is to resolve issues early and maintain an on-going dialogue between PACCAR Parts, the council members and Kenworth Parts Managers on important topics and strategic initiatives.

From the PACCAR Parts Charter

Over the last two years, the council has worked to improve communication through very challenging supply chain issues. We now receive monthly updates from PACCAR Parts that bring us up to date

on changes in the supply chain landscape. This allows us the ability to provide more information to our customer base during these challenging times.

The council has been active in providing feedback about new technology systems that PACCAR Parts deployed such as Generation 2 Online Parts

Counter (OPC), OPC 2 Fleet Integration and eDealer. We have also influenced improvements in call center response times, volume sales delays and managed dealer inventory measurables, which all helps dealerships provide a better experience for their customers. Looking forward, the council is working with PACCAR Parts to develop a more structured

training pathway for new parts employees. This will allow Kenworth dealerships to provide any newly hired parts team members with a clear path to how they can work to improve their skills and expand their knowledge in order to become a successful parts professional faster than they are able to achieve today.

As your Great Lakes Regional Parts Council Chairperson, I am happy to present any issues that our teams encounter to the leadership team at PACCAR Parts and I hope that you enjoy your experience in all of our Rihm Kenworth dealerships. Thank you all for your business and please let us know what we can do to be even better, both locally and nationally.

REVIVA®

WHO WE ARE:

For over 70 years, Reviva has been providing quality remanufactured engines. We are a veteran-owned and operated company that has grown into the largest independently owned diesel engine remanufacturer in North America, located in Minneapolis MN.

The Right engine, the right process, the right company-That's Reviva. We have you covered from class three to eight diesel engines, for both on and off highway applications, as well as gas engines, and cylinder heads. Head to Reviva.com and download our product bulletins.

WHAT WE OFFER:

Diesel Engines:

Caterpillar, Cummins, Ford, General Motors, International, Mercedes

Cylinder Heads:

Caterpillar, Cummins, International

EXPERIENCE THE REVIVA DIFFERENCE TODAY!

Every engine is completely disassembled.

All components cleaned and detailed.

All major components meet or exceed OE specifications.

Wear parts are replaced with 100% new.

Fuel Systems and Turbochargers are remanufactured and tested.

Long block and long block Supremes are SIM tested.

All Drop-In engines are dyno tested on electronically controlled dynamometers.

Finally painted, packed, and prepped for delivery.

Every Engine Built to its Exact Serial Number

Contact your Rihm Kenworth Parts Representative for more information.

SUCCESSFUL DEALER AWARD

Rihm Family Companies selected as a 2022 finalist

Finalists selected for 2022 Successful Dealer Award

written by Lucas Deal, Trucks, Parts, Service

Trucks, Parts, Service is thrilled to announce the finalists for the 10th annual Successful Dealer Award, sponsored by Automann, Interstate Billing Service, National Truck Protection and Premium 2000.

Nominated by the commercial truck industry, this year's finalists were selected from a list of nearly two dozen semifinalists through a detailed internal evaluation process by TPS. This year's finalists represent the Autocar, Ford, Freightliner, International, Isuzu, Kenworth, Mack, Volvo and Western Star truck brands and have more than 60 total locations across the United States.

This year's finalists are Doggett Freightliner, **Rihm Kenworth**, M&K Truck Center, Peach State Truck Centers and Thompson Truck & Trailer.

Doggett Freightliner, winner of the 2019 Successful Dealer Award, is the first prior award winner to participate in the Successful Dealer Award program for the second time. Peach State Truck Centers also is participating for the second time after being a finalist in 2017. **Rihm Kenworth**, M&K Truck Center and Thompson Truck & Trailer are participating in the Successful Dealer Award program for the first time.

"Well, it has happened once again. For the 10th year in a row, we've asked the commercial trucking industry to tell us about some of the greatest businesses in the dealer channel and the industry has come through," says Lucas Deal, TPS editor and content director. "Selecting these finalists from an impressive list of nominated candidates was not an easy task, but we are confident

we have identified five spectacular dealer operations, all of which are worthy of our recognition and deserving candidates for the Successful Dealer Award."

This year's Successful Dealer Award will be presented Oct. 4, in Nashville as part of an exciting and exclusive two-day event celebrating the award program's 10-year milestone. All prior award winners and 2022 candidates will be invited to the event, which will feature multiple educational sessions and roundtable discussions about the state and future of the commercial truck dealer space, as well as social activities in the Music City, the Successful Dealer Award banquet and 2022 award presentation.

Created to honor our industry's best (not just biggest) dealers, the Successful Dealer Award highlights truck dealers who consistently showcase customer service excellence, employee empowerment and engagement, community leadership, industry engagement and more.

Business profiles of each 2022 award finalist will publish weekly on TPS beginning Aug. 31, with the winner publicly announced on Oct. 5. Last year's winner was CIT Trucks, headquartered in Normal, Ill.

SERVICE TIPS

Why regular maintenance on Espar heaters is needed

Tech Talk

Have you ever heard the phrase, “these new trucks ride like a car”? It’s true, many newer model trucks do ride and drive much better than older trucks have in the past. Many of the newer trucks also include a lot more creature comforts that make those long hours spent behind the wheel, or sitting and waiting during downtime, as comfortable as possible for drivers. One of those comforts is known as the Espar, or bunk heater.

With winter fast approaching, and Driver Appreciation Week happening this month, now is the perfect time to start getting those Espar heaters up and running to make sure all your drivers are warm and comfortable during those cold winter nights. This is also a great way to help increase your driver retention rate, which can be difficult in this day and age, as no one likes to sleep in a cold bunk!

As with many things on a truck, some simple maintenance can make a world of a difference in how efficiently it runs. Without regular maintenance checks, a driver may instead find themselves in a situation where they turn on the Espar, hear the fan and fuel pump making noises, and then think to themselves, “oh no, here we go again”. The heater then would start to smoke from all the exhaust and proceeds not to light. Many times, this can be caused by a carbonized glow plug or screen, or from the vent hole being blocked. This can also happen in cases where the glow plug or pin are just not functioning fully at 100%.

There are a few steps you can take to help reduce the likelihood of this happening:

1. Run the Espar at least 20 minutes a month, even in the off months. This helps the unit stay cleaner, while also cutting down on the possibility of carbon building up during those times when it is not in regular use.
2. Have your local Rihm Kenworth service department perform a routine maintenance check on the Espar heater. Many people don’t realize these units need regular servicing scheduled at times similar to a PM service for the engine on the truck itself. This maintenance task generally includes removing the glow plug and pin screen, inspecting them and then cleaning or replacing them. You will also need to inspect the vent hole for clogging, along with also checking the ducting, air intake screen and outlet, and the combustion air intake and exhaust for any blockages or restrictions that may be present.

What if your truck doesn’t currently have a bunk heater installed?

Any of our Rihm Kenworth dealership locations would be happy to install a new kit for you! The cost is \$2,925.00 plus tax and can typically be completed in a single day with a scheduled appointment.

Please contact the Rihm dealer closest to you for details and fleet pricing.

Meet Your Parts Professional

Greg is a Rihm Outside Sales Representative for the parts department at our Coon Rapids dealership location. He loves that by doing his job, he also gets the chance to meet and work with a variety of people throughout the trucking industry, which he has been a part of for over 18 years. A fun fact about Greg is that he actually grew up in Coon Rapids, not far from the dealership. After work you'll often find him out on the ball field, playing a game of softball with his team.

Greg Swedlund
Outside Sales Representative

Main Store Location: Coon Rapids, MN

COMPLETE PROTECTION FOR YOUR HEAVY-DUTY ENGINE

CELEBRATING AMERICA'S TRUCK DRIVERS

Overview of 2022's Truck Driver Appreciation Week

Written by the ATA, published on trucking.org

Nearly every aspect of daily life is made possible because a truck driver delivered the goods and resources people need.

National Truck Driver Appreciation Week is an important time for America to pay respect and thank all the professional truck drivers for their hard work and commitment in undertaking one of our economy's most demanding and important jobs. These 3.6 million professional men and women not only deliver our goods safely, securely, and on time, but they also keep our highways safe.

This year's National Truck Driver Appreciation Week is September 11-17, 2022.

Americans in all fifty states have taken extraordinary steps to show their appreciation for the important work that professional truck drivers have done as we navigate our way through the coronavirus pandemic. From children passing out lunches, to "I Heart Truck" signs across America's highways, the public has taken notice of the essential role truck drivers play in their lives.

This week is a way to show appreciation to the 3.6 million professional men and women who not only deliver our goods safely, securely, and on time, but also keep our highways safe.

New Medium Duty Hood and Cab Combinations

By Kenworth Truck Company

Are you struggling with selecting the proper hood/cab combination for your new 2.1m MD truck? We often get asked for hood and cab dimensions. To define the cab heights and lengths, we need to know what hood and roof you are selecting on your spec. The new medium duty vehicles have three hood variations: a short hood that has a 107.5" bumper to back of cab, and medium and vocational hoods that have a 109.5" bumper to back of cab. The second variable for cab dimensions is the difference between the standard low roof and our optional raised roof. A cab with a low roof is 63" tall from

floor to roof, and a raised roof is 67" tall which represents a 4" difference between the two options. That can make a difference between allowing a crane boom to fit under a bridge or allowing enough headroom to let the driver keep his hard hat on. Heights for the short hood, medium hood and vocational hood with low roof are 74", 75" and 80" respectively. When paired with a raised roof, it is 78", 79" and 84" respectively, all measured from bottom of rail. Be sure to **scan the QR code below to review the Body Builder Manual** for more details as needed, and remember that our vocational hood is not available until late 2022.

FINANCING TIPS

Financing options available with \$0 down

LOW ON CASH? YOU MIGHT STILL QUALIFY TO FINANCE A TRUCK!

WHY CHOOSE TO FINANCE?

In some cases companies may need to put money for a down payment or purchase towards other investments that will help grow the company faster. In situations like this, or any time that monetary resources may be low, choosing to finance equipment instead of purchasing can allow a company to generate revenue, or increase efficiencies, while still keeping enough capital on-hand to put towards other growth opportunities or investments.

Cash down amounts are dependent on approved credit.
